On September 25 of this year.

Work was done on the subject of "Software Engineering Workshop" taught by Professor Alducin Cabrera Alejandro. The 'Calculators' project with the "May-Ness" Team. Which is being developed in the GitHub Desktop program.

Each member of the team is developing the functions of the project.

- ✓ Roberto (Main); Develops the multiplication function.
- ✓ Alejandro (); Develops the addition function.
- ✓ Alan (); Develops the division function.
- ✓ Uriel (); Develops the subtraction function.

In the program, our colleague Roberto created a "CRURRENT REPOSITORY" with the help of the following link, which allowed us to connect each of the members.

https://github.com/R-x-Z-y/MAY-NESS-Calculadora_v1.git

Each member then performed their corresponding function in the "Visual Studio Code" program and then added it to the repository using a PULL REQUEST.
